Lab 1 - Role and Responsibilities of UX professionals

Purpose: This assignment aims to identify the critical skills and responsibilities of User Experience professionals. One way we can learn more about what UX professionals do is to review various job postings. Identifying key job skills/responsibilities found in current job postings will allow you to gain a better understanding of what skills companies find important. You will also discover that most of the responsibilities identified in UX job postings fall within the UX core components.
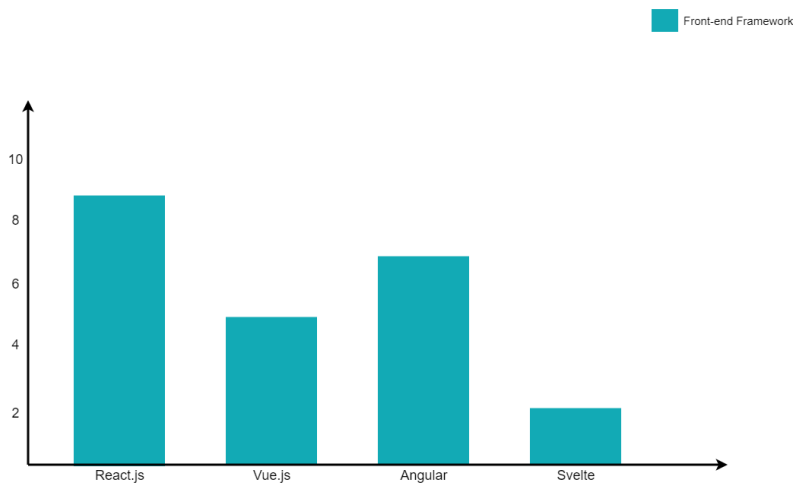

Description: You will research 12 different job postings and aggregate the various job skills/responsibilities listed in the post. Only use job skills/responsibilities that show up on three or more of the job postings when aggregating your data. Listed below are a few sites you may consider when searching for job postings.
Job Board Sites: dice.com, indeed.com, simplyhired.com

Instructions

Step 1: Identify 12 User Experience job descriptions by searching a variety of Job board sites. A list of job board sites can be found at some of the links above. Make sure to include the links to the job posting for this step.
UX Job titles you may want to consider:: UX Engineer, UX Designer, User Experience Specialist, Front-end Developer UX

Step 2: Use a chart in your report to summarize the total count of responsibilities found across the job descriptions. For example, the bar chart below lists the number of times certain front-end frameworks are found in 8 job postings related to front-end job postings.

Front-end frameworks mentioned across 8 job positing

Step 3: Write a short summary of your findings regarding the data you aggregate. In this summary, identify the most desired skill/responsibility or the skill was consistently represented across postings. You will also need to identify what you learned when completing this lab.

Submission:
Submit your report prior to the due date and time listed in Sakai. Acceptable submissions include .docx and .pdf extensions.
